## 1. Aim

North Metropolitan Health Service (NMHS) MH support consumers and staff to adopt practices and behaviours that contributes to their sexual safety within their inpatient services. NMHS MH inpatient services provide staff with training and education to enable them to effectively promote strategies to support sexual safety and to respond appropriately and sensitively to sexual safety issues in accordance with the [Chief Psychiatrist of Western Australia Sexual Safety Guidelines](#)

## 2. Background

A sexual safe environment is:

- Trauma informed, gender sensitive and emphasised recovery.
- Balances personal autonomy and decision making with a duty of care to provide a safe and therapeutic environment for all consumers.

- Recognises the common needs of individuals for privacy and personal space, and that these needs vary between individuals, regardless of gender identity or sexual orientation.
- Recognises the need for routine identification of sexual risk in all consumers who receive care from mental health services.
- Recognises the vulnerability of some consumers due to past history, illness, emotional turmoil or need.
- Promotes treatment and early recovery, and actively manages potential disruptions to treatment and wellbeing as a result of breaches of sexual safety.
- Promotes personal self-care, respect, resilience and self-determination.
- Responds sensitively to disclosure of past or current sexual assault or abuse.
- Listens and responds sensitively and appropriately to all concerns raised about sexual safety.

The inpatient setting should allow for a balance between personal autonomy and decision making with a duty of care and consider:

- The common need of consumers for privacy and personal space, and that these needs vary between individuals regardless of sexual orientation or gender orientation.
- The need for routine identification (through risk assessment) of sexual risk in all consumers.
- Promoting treatment and early recovery, and actively manages potential disruptions to treatment and wellbeing.
- Promoting personal self-care, respect, resilience and self-determination.
- Impacts of Sexual Abuse, Assault, Harassment or Inappropriate Sexual Activity.

Mental health professionals need to be aware of possible past sexual abuse and how this may increase a consumer's and other's vulnerability to further inappropriate sexual activity, exposure or exploitation by others. The impacts of sexual assault and harassment can be severe and long lasting.

## Individuals with increased vulnerability to sexual or predatory risk

Some consumers have increased vulnerability to sexual risk:

- Consumers with a cognitive impairment (including cognitive impairment from mental illness) are vulnerable to abuse.
- Individuals (male and female) who have a history of physical and sexual abuse tend to have a higher degree of lifetime exposure to sexual abuse and violence.
- LGBTIQ<sup>1</sup> consumers experience increased vulnerability to sexual victimisation.
- Consumers who are heavily sedated are more vulnerable to sexual assault.

## Individuals with increased risk of inappropriate sexual behaviour

Some consumers have increased risk of inappropriate sexual behaviour. Some consumers may enact inappropriate sexual behaviour because of their mental illness, an organic brain syndrome, acquired brain injury, or substance use, for example, a patient with sexual disinhibition may act out their impulses.

Some individuals may be more predatory in intent and engage in opportunistic behaviour and target vulnerable consumers, which in some instances may be a repetition of their own experience of past sexual abuse or because of their mental illness. Deliberate tactics may be used to select and sexually abuse vulnerable or desirable consumers. These include:

- Recruiting consumers by means of bribes (money, cigarettes, food, and other items) or offering perceptions of care, love and intimacy.
- Utilising power/positions of power to gain confidence and trust for the purposes of gaining sexual favours. Maintaining accessibility by using threats to discourage the individual from disclosing the assault.
- Grooming staff by ingratiating themselves as helpful and suggesting to staff that the individual they assaulted is lying.

## 3. Risk

Guidance is required to reduce the likelihood of the severe clinical risks of assault, harassment and abuse in NMHS MH inpatient services. Supporting and promoting sexual safety to prevent the occurrence of these events in inpatient services also reduces potential financial risks through legal claims against the service) and reputational risks through adverse media exposure. Non-compliance with this guideline will impact on the following risk categories:

|                                       |                                     |                                 |                                     |
|---------------------------------------|-------------------------------------|---------------------------------|-------------------------------------|

---

## 4. Definitions

**Sexual safety:** the respect and maintenance of an individual's physical (including sexual) and psychological boundaries.

**Child sexual abuse:** when an adult, adolescent or child uses their power or authority to involve a child in sexual activity. It includes sexual behaviour where a child is bribed, coerced, threatened, exploited or forced; where a child has less power than the person/s involved; or where there is a significant difference in the child's developmental age or maturity and that of the other person involved.

**Sexual assault:** when a person is forced, coerced or tricked into sexual acts against their will or without their consent.

**Sexual harassment:** an unwelcome sexual advance, unwelcome request for sexual favours or other unwelcome conduct of a sexual nature in relation to another person.

**Sexually disinhibited behaviour:** an inability to restrain sexual impulses that involves sexual behaviour or talk which is considered inappropriate for a particular environment. This behaviour may result from a mental illness or disorder, alcohol intoxication, illicit drug use or the side effects of medication.

**Consensual sexual activity:** any activity of a sexual nature (e.g. sexual touching, sexual intercourse, anal and oral sex) that occurs when both parties are of legal age, agree to engage in the activity by choice, and have the freedom and capacity to make that choice. In Western Australia, the legal age for males and females to consent to sexual activity is 16 years; however, it is an offence for a person in a supervisory role or relationship of authority to sexually engage with a person under their special care who is under 18 years of age.

**Professional boundaries:** invisible structures imposed by legal, ethical and professional bodies that determine the limits of a relationship between an employee and the consumer and family. They define the effective and appropriate interactions between professionals and the public they serve.

## 5. Principles

- All consumers, their family members and staff in inpatient services have a right to be in a safe and suitable environment
- Mental Health Services have a responsibility to take action to prevent and appropriately respond to sexual safety incidents (including sexually disinhibited behaviour, sexual harassment and sexual assault), provide a service that is fair and equitable, available to a diverse range of individuals, and free from discrimination
- Positive relationships and mutual respect between staff, between staff and consumers, between staff and guardians/nominated persons, and between consumers themselves are encouraged and modelled
- Inpatient services will foster a compassionate, sensitive and open culture that encourages incident reporting relating to the sexual safety of consumers, their families, and staff
- It is illegal for a staff member to engage in sexual activity with a consumer. See [WA Criminal Code](#). Any sexual activity between a staff member and a consumer will be dealt with in accordance with the [WA Health MP0125/19 Notifiable and Reportable Conduct Policy](#)

NMHS MH inpatient services support consumers, their families and staff to adopt practices and behaviours that contribute to their sexual safety, both within the mental health service

---

---

environment and the broader community. In inpatient services, information is provided to consumers, families and advocates on their individual rights and responsibilities, acceptable and unacceptable behaviours, and appropriate avenues for complaint, recourse and redress regarding issues of sexual safety.

## 6. Procedure

### 6.1 Assessment of Sexual Risk

All consumers' sexual safety issues will be approached in a sensitive and considered manner and will be identified in their Registration and Risk Assessment and Management Plan (RAMP) on admission. Provision for ongoing sexual safety assessment should also occur where indicated throughout the treatment phase.

Assessment of a consumer's sexual offending risk and sexual vulnerability should include present or past history of exposure to sexual abuse and/or inappropriate sexual activity as part of a developmental history including:

- Sexual history, sexual development, sexual and gender orientation, HIV status and any other sexually transmitted diseases.
- History of and vulnerability to sexual abuse, assault or harassment.
- History of and potential for sexual activity due to illness, emotional state or behaviour.
- History of and potential for sexually inappropriate behaviour including sexual disinhibition, sexual harassment or sexual assault.
- Any concerns relating to visitors that may contribute to the person's sexual vulnerability or risk of sexually inappropriate behaviour.
- History of and potential for violent behaviour, threats or intimidation.

The assessment should consider the presence of signs or symptoms that can indicate a previous sexual assault including but not limited to:

- Disturbed sleep, frequent nightmares, flashbacks to the assault.
- Embarrassment, shame, eroded self-esteem, poor body image, weight gain used as a protective mechanism.
- Highly sexualised behaviour, hostility and behavioural problems, self-harming and compulsive behaviours.
- Relationship difficulties, feelings of isolation, guilt or self-blame, suicidal thoughts and suicide attempts, a range of mental health disorders.

### 6.2 Psychoeducation

- Consumers identified as being at risk of sexual vulnerability or sexually inappropriate behaviour will be supported to access education and advice to enable them to effectively recognise and respond to behaviours, both their own and other peoples, that may compromise or breach their own or another person's sexual safety.

### 6.3 Staff allocation

- Unless clinically contraindicated, consumers will be allocated to staff members best placed to support their respective sexual safety concerns in line with their requests.
- Staff to be respectful when asking consumers, particularly consumers identifying as LGBTIQ their preferred gender of the nursing staff involved in their care.

- 
- Two staff, at least one of the same gender or preference as identified by the consumer, are to be present during all Safety Checks throughout the night shift where sexual vulnerability or risk has been identified.

#### 6.4 Observation and review

- Medical reviews such as a physical assessment to be conducted with a chaperone as per the [NMHS Chaperone Policy](#).
- Clinical observations of consumers deemed to be sexually at risk will be initiated, maintained and regularly reviewed. To ensure maximum visibility, consumers deemed to be sexually at risk are to be allocated to the bedrooms closest to the staff base. Where this is not possible, clinical observations and alternative placement should be considered and documented accordingly.
- Operational plans to increase staff vigilance and observation at times when staff are less available (e.g meal times) should form part of the ward daily routine.
- The consumers Treatment, Support and Discharge Plan (TSDP) on the Web Psychiatric Services Online Information System (Web PSOLIS) must be updated regularly in consultation with the patient and reflect the identified risk and management plan and is signed by the consumer where possible in accordance with Statewide Standardised Clinical Documentation (SSCD) requirements.

#### 6.5 Management of consumers exhibiting inappropriate sexual behaviour

Where an assessment has identified that a consumer has the potential to engage in inappropriate sexual behaviour the following actions should be undertaken:

- Where possible the RAMP and PSOLIS Management Plan should be developed in collaboration with the consumer and their guardians/Nominated Persons to ensure a sense of sexual safety.
- The RAMP, management plan and integrated progress notes should include relevant details from the assessment:
  - History or reports of sexual disinhibition or aggression from whatever cause, for example, mental illness, substance use, acquired brain injury;
  - History of sexual activity in previous admissions or having a history of inappropriate sexual activity or sexually offending behaviour;
  - History of past sexual abuse perpetrated against him / her
  - History of violent behaviour, threats or intimidation;
  - History of domestic violence;
  - History of illicit drug and alcohol use.
- Risks are to be highlighted at inpatient review meetings or multidisciplinary team review meetings and at handover. Staff are to activate a PSOLIS alert, iSoBAR information handover and includes an alert on the patient's journey board where possible. Include plans to manage inappropriate sexual behaviour and gender of clinicians within the TSDP/management plan
- Inpatient services should identify sexual safety practices appropriate for their particular setting, in collaboration with all members of the service including staff, consumers and their families, clinicians and advocates and communicate these accordingly.
- Identified offenders are to be closely monitored and regularly assessed throughout their admission and at times of transition, such as movement to high or lower dependency areas, or imminent discharge. Encourage the consumer to be involved in unit activities

---

and programs to minimise isolation with appropriate strategies in place to support/manage risk or vulnerability

- Monitor visitor interactions for inappropriate behaviour, particularly of a sexual nature where concerns are identified
- Where a consumer is identified as of particular risk, choose a therapy room with an observation window, a room close to reception where available and/or keep the door ajar during sessions.
- Familiarise consumers with their rights, responsibilities, ward rules and acceptable use regarding recording and sharing of images of themselves and others online and social media sites.
- Regulate use of personal electronic devices where appropriate to do so and in line with the [Mental Health Act 2014 \(WA\)](#).
- In the event of a sexual safety breach, ensure staff follow the [NMHS MH Sexual Assault – Reporting and Management of Policy](#) and the [WA Health Responding to an Allegation of Sexual Assault Disclosed within a Public Mental Health Service](#).
- Debrief is of paramount importance for all staff and/or coinsumers involved in a sexual safety incident and should be followed up by an identified lead clinician.

## 6.6 Staff

NMHS MH are required to employ staff to support and promote a safe inpatient environment. All staff, including volunteers, are screened and continuously monitored for offences of concern by undergoing a Criminal Clearance and Working With Children's check (where working with under 18 year olds).

Staff also have the right to feel safe from acts that compromise or breach their sexual safety while in a mental health service environment or in the course of their work in the community:

- Staff should take care not to place themselves in vulnerable settings whereby the potential for allegation may arise such as being isolated in consumers' bedrooms where this potential exists
- Staff (including agency staff and students) are to dress in a manner appropriate to their professional role and in accordance with the [NMHS Dress Code Policy](#).

## 6.7 Reporting

- Staff will foster a compassionate and open culture that encourages reporting of incidents relating to the sexual safety of consumer being cognisant of past trauma history.
- Staff will proactively identify potential for re-traumatising consumers with trauma histories.
- Disclosures from consumers about incidents that compromise or breach their sexual safety are to be believed, taken seriously and addressed promptly and empathetically by staff.
- If a patient reports an alleged sexual assault, staff must inform their immediate line manager and the consultant psychiatrist and follow the [NMHS MH Sexual Assault – Reporting and Management of Policy](#) and [WA Health Responding to an Allegation of Sexual Assault Disclosed within a Public Mental Health Service](#). Where indicated this should include a clinical incident report through DatixCIMS.
- All sexual assault reports must be documented appropriately and kept and maintained separately from the integrated patient notes, as per the [WA Health MP0130/20 Complaints Management Policy](#).
- A record must be made in the integrated progress notes about the complaint existence of this in a separate confidential file with clear information in relation to location and storage.

- The Chief Psychiatrist is to be notified of any incidents as per the [Office of the Chief Psychiatrist Policy for Mandatory Reporting of Notifiable Incidents to the Chief Psychiatrist – Policy for Public Mental Health Services](#).

## 7. Sexual Assault Resource Centre (SARC) and Resources

Please refer to the following guidelines and resources:

- [NMHS SARC Referral guidelines](#)
- [NMHS SARC Sensative, trauma-informed healthcare for health professionals](#)
- [NMHS SARC Supporter's guide for people supporting an adult survivor of sexual trauma](#)
- [KEMH – Sexual Trauma, Consent and Coping](#)

## 8. Compliance and evaluation

Compliance with this guidfeline will be evaluated against assessments of the consumers sexual safety through completed RAMP form in Clinical Documentation Audits.

Clinical Incidents reporting and OSH Hazard Incident Reporting for Code Blacks where sexual safety breaches occur will also be monitored and reviewed.

Complaints relating to allegations of sexual harassment or abuse will be monitored and reviewed.
