Guideline

Clinical Psychology & Clinical Neuropsychology Recording for Supervision

Reference #: FSFH-MENH-GUI-0012

Scope

Site	Service/Department/Unit	Disciplines
Fremantle Hospital	Mental Health Service	Clinical Psychology, Clinical Neuropsychology, Medical, Nursing, Allied Health

1. Introduction

Recording of consented clinical psychology sessions for Supervision and Accreditation is permitted with client consent to a secure platform (Microsoft (MS) Teams) and destroyed after use. Recorded sessions are not stored in the client's medical record to protect client confidentiality. This guideline outlines the process for consent, recording and management of recorded clinical psychology or clinical neuropsychology sessions for the purposes of supervision.

2. Terminology

Supervision	Process of professional learning and development conducted with a supervisor, accreditor, or with peers in one-on-one or group format, for the purposes of professional development and support in the practice of psychology and includes a critically reflective focus on the practitioner's own practice.
Accreditation	Official recognition of psychologist being qualified to perform a particular practice within psychology
Supervisor/Accreditor	Subject matter expert and/or accrediting body. May not be employed by Department of Health e.g. EMDRAA

3.Guideline

- Clinical Psychologists (CP) and Clinical Neuropsychologists (CNP) will:
 - provide the client with SMHS session recording information and ensure the clients understanding of the process
 - request the client to sign the consent form for video and audio recording and send the consent for scanning to medical record prior to session taking place. Refer to Appendix 1.
- The consent form will include information regarding who may access the recording including access by non-Department of Health (DoH) supervisors/accreditors and the management/deletion of recordings to ensure both clinicians and patients are aware.
- MS Teams is the WA Health Department preferred software and allows for controlled access of recordings and existing processes to remain in place with externally invited guests.
- The DoH CP/CNP will be the 'organiser' of the MS Teams meeting, providing the facility to switch OFF any permission for external recording of sessions.
- Session between clinician and consumer booked as a MS Teams meeting between clinician and their supervisor.
- Clinician records the session via teams using desktop computer camera and audio.
- Supervisor can then access recording via opening the teams meeting in calendar or MS Stream application within MS Teams
- Recordings will only be accessible to the CPs or CNPs who are engaging in a supervision/training process (individual or group). Once the supervision has concluded, the data will be deleted according to the lifecycle management plan that details the process of making, access, and deletion.
- The video will be deleted following authorised use or automatically deleted after three months.
- Clinical notes from a session will be documented in medical record as per the FSFHG Clinical Documentation policy and procedure.

3.1. Non-DoH clinicians:

- Non-DoH individuals engaged in the supervision/accrediting would only be able to view the content shared for supervision purposes at the time of the supervision session.
- Non-DoH individuals would not be on the network, rather invited to an MS Teams meeting in the same way that DoH routinely utilises MS Teams with external agencies.

4.Compliance/Performance Monitoring

- The Clinical Psychology Professional Lead will be responsible for monitoring compliance with this document. Compliance will be monitored by annual auditing of database to ensure recordings are deleted as per the guideline.
- Clinicians recording sessions will document date of recording, date of supervisor access and date of deletion in a data base established for this purpose.

Clinical Psychology and Clinical Neuropsychology Sessions

CONSENT FORM FOR VIDEO OR AUDIO RECORDING

Information for the Client

1. Sessions are recorded for the purpose of supervising our staff and students who are undertaking training for quality assurance purposes. The recording allows the psychologist to gain feedback about their approach with the view to ensuring that the service you receive is of a high standard. These standards are required for psychologists to become registered and / or accredited in particular treatments (e.g., DBT or EMDR)
2. This form is to obtain your consent for your session to be recorded via MS Teams and for that recording to be viewed by your psychologist and their clinical supervisor or accreditator only.
3. Recordings are treated as confidential material. All staff members undertake to safeguard recordings at all times. Recordings will be stored securely within a cloud-based software (One drive). Your clinician is responsible for ensuring that they are used appropriately and only for the purposes you have given consent for. The recording is only able to be accessed by the supervisor or accreditator on invitation by your psychologist. The recording is deleted permanently once the supervision process has been completed. The recording is not intended as a permanent record. All clinicians will ensure that arrangements are made for the erasure of material. The maximum time period for recordings to be stored is three months after which time they will be automatically deleted.
4. Any supervisors or accreditors external to the Department of Health will be invited by your clinician to view the content of the video for supervision purposes at the time of the supervision session only and do not have ability / permissions to modify or keep the record.
5. Everyone has the right to refuse permission for recording. We will not record a session unless we have your permission. Even if you agree to recordings being made, you have the right at any time to ask that all the recordings, or a particular one, or one piece of the recording be erased.
6. All staff members are bound by the professional Code of Ethics and Public Sector standards.
